

How to Use Time-Lapse Photography Function of NVR

Title:	How to Use Time-Lapse Photography Function of NVR	Version:	v1.0	Date:	2022/7/01
Product:	NVR			Page:	1 of 5

Function Introduction

Delay photography NVR, this product complements the application of back-end products in scene recording and live broadcasting of special industries, such as natural scenery, construction sites, ecological greenhouses, food safety and other fields.

Supported NVR Models and Versions

SAP code	Device Models	Versions
303616832	DS-9632NXI-I8/S(标配)(C)/TIME-LAPSE	4.60.105
303616833	DS-7716NXI-I4/S(标配)(C)/TIME-LAPSE	
303616834	DS-7608NXI-I2/8P/S(标配)(C)/TIME-LAPSE	
303616835	DS-7608NXI-I2/S(标配)(C)/TIME-LAPSE

Steps for Configuration

Local GUI

- 1. Time-Lapse Photography Shooting Parameters
- (1) Shooting Interval

Log in to the local GUI of the device and click "System" – "General" – "Time-Lapse Photography Shooting Interval" as shown in the following figure.

Select the shooting interval. The options are: 10, 15, 20, 30, 45, 60, 120, 240, 360 minutes. The default is every 10 minutes.

(2) Quota

Click "Storage" – "storage mode" – "Time-Lapse Photography Quota" as shown in the following figure. After selection, the device will reserve corresponding space in the HDD for storing time-lapse photography materials.

The user can select the quota mode of time-lapse photography for each channel. The options are: 15G for 6 months, 25 G for 12 months, 50 G for 24 months and 400 G for 24 months

Note: when the NVR channel enables the ultra HD resolution mode and add 32m resolution IPC, please select the quota mode as 400G for 24 months if user wants to generate time-lapse photography of two years (only channel 1 can select 400G for 24 months).

Back

Web site

The configuration and usage of the time-lapse Photography function in web side are the same as that of the local side, but the functional location is slightly different. The details are as follows:

- 1. Time-Lapse Photography Shooting Parameters
- (1) Shooting Interval:

Log in to the web of the device and click "Configuration" – "Time-Lapse Photography Quota" – "Parameter Settings" as shown in the following figure. Choose the shooting interval then click "save".

(2) Quota

Click "Configuration" –"Storage management"– "Time-Lapse Photography Quota" as shown in the following figure. The user can select the quota mode of timelapse photography for each channel. After selection, the device will reserve corresponding space in the HDD for storing time-lapse photography materials.

Title:	How to Use Time-Lapse Photography Function of NVR	Version:	v1.0	Date:	2022/7/01
Product:	NVR			Page:	8 of 5

Note: when the NVR channel enables the ultra HD resolution mode and add 32MP resolution IPC, please select the quota mode as 400G for 24 months if user wants to generate time-lapse photography of two years (only channel 1 can select 400G for 24 months).

2. Create the Time-Lapse Photography video

The path is "configuration" – "Time-Lapse Photography Quota"

Other Functions of Time-Lapse Photography NVR

Streaming through RTMP protocol

It supports pushing real-time streams through RTMP protocol to 3 platforms at the same time, but customer needs to set up their own RTMP server.

The path to enable RTMP in web site is "Configuration" – "Network"– "Advanced Settings"– "RTMP" as shown in the following figure (it can only be enabled and configured in web site).

Select the type of stream needs to be pushed, input the RTMP streaming URL provided by the third-party RTMP service, and click save.

Title:	How to Use Time-Lapse Photography Function of NVR	Version:	v1.0	Date:	2022/7/01
Product:	NVR			Page:	12 of 5

Note: Only H.264 video encoding format is supported, and only AAC audio format is supported.

Streaming through HSL

Enable the HSL function in "Configuration" – "Network"– "Advanced Settings"– "Network Service" – "Enable HLS Service" in web site or "Maintenance" – "System Service"– "System Service "– "Enable HLS Push-Stream Service" in local GUI as shown in the following figure.

The URL of HSL streaming is:

http://xx.xx.xx/HLS/channel/501/preview.m3u8

xx.xx.xx means the IP of NVR;

Title:	How to Use Time-Lapse Photography Function of NVR	Version:	v1.0	Date:	2022/7/01
Product:	NVR			Page:	13 of 5

The meaning of 501 is: 5 refers to the fifth channel, 01 refers to the main stream, and 02 refers to the sub stream

When the network is in good condition, you can access the above URL by using Apple Safari browser directly to get the stream.

Note:

- 1. Only H.264 video encoding format is supported, and only AAC audio format is supported.
- 2. Only the first 8 channels support HSL function.

Notes

- 1. Supports up to 32mp IPC
- 2. It supports 8-channel time-lapse photography function (only the first 8 channels), and can generate time-lapse photography and video with a maximum period of 2 years.
- For multi-channels IPC, only when Encoder Track set to 1 can the Time-Lapse Photography, RTMP and HSL function be available.

- 4. The time required to generate the time-lapse photography video is linearly related to the video length selected by the user. For example, if it takes 1 minute to generate a 15 second video, then it will takes about 12 minutes to generate a 180 second video.
- 5. When generate the time-lapse photography video on the web, the live view and playback on local GUI will be unavailable and keep in a black screen state. Therefore, if the customer needs to generate a video with a long time or must be able to live view and playback in real time, it is recommended to generate it

Title:	How to Use Time-Lapse Photography Function of NVR	Version:	v1.0	Date:	2022/7/01
Product:	NVR			Page:	14 of 5

on local GUI. While generating it on local GUI, customer can live view or playback in web site.

6. If it is determined that there are multiple days of videos in the HDD of the device, and the parameter configuration meets the requirements, and there is still a prompt shows there is insufficient material when generating videos, you can try to repair the database to solve the issue.

HIKVISION		Live View	Playback	Picture	Application	Configuration	Display Alarm
Local		HDD Management	Net HDD	HDD De	etection SS	D Management	Time-Lapse Photogr
∃ System	~	ô Set 🔓 Forma	t 💽 Rebuil	d Video	ලි Rebuild All Dat	a	
□ Video/Audio		HDD No.		Capacity		Synchronization	State Free :
🖹 Event	~	✓ 3		931.51GB		Normal	787.0

- 7. If the actual resolution of the channels are less than 4MP, the material will use the actual resolution to generate time-lapse photography video. If the actual resolution of the channels are higher than 4MP, then the resolution of the material used will be reduced to 4MP by default when generating time-lapse photography video.
- 8. The time-lapse photography video will be regenerated every time according to the selected parameters, and each generation will overwrite the previous video, so the historically generated video cannot be queried, and the currently generated video will also become invalid after the device rebooted.
